"bio": "",
"expertise": "",
"workExperience": "",
"licenceInformation": [
 { "uuid": "", "licenseState": "", "licenseNumber": "" }
],
"dealInformation": [
 { "deaState": "", "deaNumber": "", "deaTermDate": "", "deaActiveDate": "" }
]
}
```

✅ Validation:

Status code must be 200 or 201

Extract providerId from the JSON response (response.providerId)

Extract providerId:

- If response contains providerId → use it.
- If not → call GET `/api/master/provider?email= Samruddhi9798@mail.com`
- From that response, extract `providerId`.

Store this providerId in a variable for Step 2.

Step 2 → Set Provider Availability

Use the providerId from Step 1 dynamically in the request body.

Method: POST

Endpoint: /api/master/provider/availability-setting

Body:

json

Copy

Edit

```
{
 "setToWeekdays": false,
 "providerId": "<USE providerId from Step 1>",
 "bookingWindow": "3",
 "timezone": "EST",
 "bufferTime": 0,
 "initialConsultTime": 0,
 "followupConsultTime": 0,
 "settings": [
 { "type": "NEW", "slotTime": "30", "minNoticeUnit": "8_HOUR" }
],
 "blockDays": [],
 "daySlots": [
 { "day": "MONDAY", "startTime": "12:00:00", "endTime": "13:00:00", "availabilityMode": "VIRTUAL" },
 { "day": "TUESDAY", "startTime": "12:00:00", "endTime": "13:00:00", "availabilityMode": "VIRTUAL" },
 { "day": "WEDNESDAY", "startTime": "12:00:00", "endTime": "13:00:00", "availabilityMode": "VIRTUAL" },
 { "day": "THURSDAY", "startTime": "12:00:00", "endTime": "13:00:00", "availabilityMode": "VIRTUAL" },
 { "day": "FRIDAY", "startTime": "12:00:00", "endTime": "13:00:00", "availabilityMode": "VIRTUAL" }
],
 "bookBefore": "undefined undefined",
 "xTENANTID": "stage_aithinkitive"
}
```

 Validation:

**Status code must be 200 or 201**

**Verify providerId in the response matches Step 1**

### **Step 3: Create Patient**

**Method: POST**

**Endpoint: /api/master/patient**

**Request Body:**

```
{
 "phoneNotAvailable": true,
 "emailNotAvailable": true,
 "registrationDate": "",
 "firstName": "Aiana",

 "middleName": "",
 "lastName": "rodriguess",
 "timezone": "IST",
 "birthDate": "2001-08-16T18:30:00.000Z",

 "signedDate": "2025-07-27T08:07:34.316Z"
 }
]
}
```

✅ Validation:

Status code must be 200 or 201

Extract patientId from the JSON response (response.patientId)

Extract patientId:

- If response contains patientId → use it.
- If not → call GET `/api/master/patient? firstName = Aliana`
- From that response, extract `patientId`.

Store this patientId in a variable for Step 4.

#### Step 4: Book Appointment

Method: POST

Endpoint: /api/master/appointment

Request Body:

```
{
 "mode": "VIRTUAL",
 "patientId": "{{patientId_from_step3}}",
 "customForms": null,
```

```
"visit_type": "",
"type": "NEW",
"paymentType": "CASH",
"providerId": "{{providerId_from_step1}}",
"startTime": "2025-08-04T17:00:00Z",
"endTime": "2025-08-04T17:30:00Z",
"insurance_type": "",
"note": "",
"authorization": "",
"forms": [],
"chiefComplaint": "appointment test",
"isRecurring": false,
"recurringFrequency": "daily",
"reminder_set": false,
"endType": "never",
"endDate": "2025-07-24T08:07:34.318Z",
"endAfter": 5,
"customFrequency": 1,
"customFrequencyUnit": "days",
"selectedWeekdays": [],
"reminder_before_number": 1,
"timezone": "CST",
"duration": 30,
"xTENANTID": "stage_aithinkitive"
}
```

#### Validation:

- Status code: 200 or 201
- Response contains: appointmentId, providerId, patientId
- Verify appointment time falls within provider availability

- **Confirm appointment status and booking details**

**Validation:**

- **Status code: 200 or 201**
- **Response contains: patientId, firstName, lastName**
- **Extract patientId for appointment booking**

- ◆ **Important Instruction for Claude:**

**Use `const response1 = await request.post(...);`**

**Extract `const providerId = (await response1.json()).providerId;`**

**Pass `providerId` dynamically in Step 2 request body.**

**Print both responses for debugging.**
